PH domain antagonist. Specifically blocks the binding of PIP3 to the Akt pleckstrin homology domain (IC_{50} = 31 μ M). Suppresses PI3K-PDK1-Akt-dependent phosphorylation. Induces apoptosis in PTEN-deficient U87MG glioblastoma cells (IC_{50} = 37 μ M)¹. Inhibiting the binding of PIP3 to effector PH domains is new point of intervention in the PI3K signaling network².
