A potent and selective fatty acid synthase (FASN) inhibitor acting via interfering with cofactor binding.¹ IC₅₀s = 147 and 213 nM respectively for inhibition of acetate and glucose incorporation into total lipids in HepG2 cells. IC₅₀=5.84 μM in an isolated enzyme assay. Displays potent antitumor activity in the MMTV-Neu HER2⁺ breast cancer model¹. Reduces HIV-1 virion production by 90% (EC₅₀=213 nM).²
