

Catalog # 10-4569 Indoximod CAS# 110117-83-4 1-Methyl-D-tryptophan Lot # FBA2173

Indoximod is a modulator of indoleamine 2,3-dioxygenase (IDO) activity.1 IDO can be used by tumors to avoid elimination by the host immune response^{2,3}, thus inhibition of IDO is an interesting cancer therapeutic option. Indoximod is not a direct inhibitor of IDO, but instead targets the IDO gene leading to downstream effects.³ IDO-mediated catabolism of tryptophan inhibits the immunoregulatory kinases mTOR and PKC5. This is relieved by Indoximod acting as a potent tryptophan mimetic restoring mTOR and PKC signaling.⁴

PHYSICAL DATA

Molecular Weight:	218.25
Molecular Formula:	C ₁₂ H ₁₄ N ₂ O ₂
Purity:	>98%
	NMR: (Conforms)
Solubility:	Soluble in DMSO (>25 mg/ml)
Physical Description:	White solid
Storage and Stability:	Store as supplied at -20° for up to 1 year from the date of purchase. Store solutions
	at -20°C for up to 1 month.

Materials provided by Focus Biomolecules are for laboratory research use only and are not intended for human or veterinary applications.
