Azoramide

CAS# 932986-18-0

N-[2-[2-(4-Chlorophenyl)-4-thiazolyl]ethyl]butanamide

Lot # JKM1143

Azoramide is a modulator of the unfolded protein response (UPR).¹ It improves endoplasmic reticulum (ER) protein folding and activates ER chaperone capacity to protect cells against ER stress. It displayed potent anti-diabetic activity in two mouse models by improving insulin sensitivity and pancreatic β cell function. Azoramide increased SERCA expression leading to enhanced calcium retention in the ER indicating calcium homeostasis as a possible mechanism for its anti-diabetic activity.
