

Catalog # 10-4945

Anle138b

CAS# 882697-00-9

5-(1,3-Benzodioxol-5-yl)-3-(3-bromophenyl)-1H-pyrazole

Lot # FBS2050

Anle138b is an aggregation inhibitor that modulates the formation of pathological oligomers of both prion and α -synuclein.¹ In mouse models of prion and diseases and Parkinson's disease, Anle138b strongly inhibited oligomer formation, neuronal degeneration, and disease progression even after disease onset.^{1,2} Anle138b has delayed disease progression and prevented motor decline in multiple neurodegenerative models.³⁻⁶ Treatment of melanoma cells with anle138b caused massive cell death via major dysregulation of autophagy revealing a protective effect of α -synuclein on autophagy in these cells.⁷ Orally bioavailable and able to cross the blood-brain barrier.

PHYSICAL DATA

Molecular Weight:	343.18
Molecular Formula:	C ₁₆ H ₁₁ BrN ₂ O ₂
Purity:	>98% by HPLC
	NMR: (Conforms)
Solubility:	DMSO (15 mg/mL with warming)
Physical Description:	White solid
Storage and Stability:	Store as supplied desiccated at -20°C for up to 1 year from the date of purchase. Solutions in DMSO may be stored at -20°C for up to 3 months.

Materials provided by Focus Biomolecules are for laboratory research use only and are not intended for human or veterinary applications.
