

Catalog # 10-3927

Indisulam

CAS# 165668-41-7

4-N-(3-Chloro-1H-indol-7-yl)benzene-1,4-disulfonamide; E7070

Lot # FBA9095

Indisulam was originally described as a potent antitumor agent that targeted the G1 phase of cell cycle via suppression of activation of CDK2 and cyclin E expression.¹ More recently it has been found to act as a molecular glue promoting the recruitment of RNA binding motif protein 39 (RBM39) to the CUL4-DCAF15 E3 ubiquitin ligase leading to proteasomal degradation.² Removal of splicing factor RBM39 leads to altered RNA splicing and death in multiple cancer cell lines – Indisulam alters the expression of more than 3000 genes and causes widespread intron retention and exon skipping.³ It induced metabolome perturbations and mitochondrial dysfunction in neuroblastoma models leading to complete tumor regression without relapse.⁴ Arginine has been found to bind to RBM39 causing reprogramming of metabolic genes to promote tumor growth – indisulam treatment leading to RBM39 degradation mimics arginine depletion resulting in reduced growth in patient-derived hepatocellular carcinoma organoids.⁵

PHYSICAL DATA

Molecular Weight:	385.84
Molecular Formula:	C ₁₄ H ₁₂ ClN ₃ O ₄ S ₂
Purity:	>98% by HPLC
	NMR: (Conforms)
Solubility:	DMSO (>25 mg/ml)
Physical Description:	Off-white solid
Storage and Stability:	Store as supplied at -20°C for up to 2 years from the date of purchase. Solutions in DMSO may be stored at -20°C for up to 1 month.

Materials provided by Focus Biomolecules are for laboratory research use only and are not intended for human or veterinary applications.
